

Who is

Cambridge Risk Control?

Cambridge Risk Control is a full service risk control consulting firm that has been in business for over 20 years. We are the risk control division of Cambridge Integrated Services Group, Inc., a comprehensive risk management services provider.

Based in the Midwest, our staff of nationwide risk control experts possess extensive experience in both sound level and air quality testing. In addition to their experience and formal education, each consultant has completed course work designed and presented by registered Certified Industrial Hygienists (CIH).

Programs & Services

We offer full service industrial hygiene testing and evaluation services. We'll work to identify workplace exposures that pose the greatest risks to facility employees. Then, we can perform evaluation and testing procedures, help develop company policies and procedures and train senior management, supervisors and line staff to address the identified risks.

Our goal is to work with you and provide the necessary tools to address specific concerns or primary loss sources. Each project starts with a meeting with senior management in order to determine your exact needs.

Additional Risk Control Services

The Cambridge Risk Control Department has a wide variety of services that can help any company with its risk control programs. A few of the ways that Cambridge Risk Control can assist are:

Workers Comp Risk Control

ARE YOU PREPARED?

ARE EMPLOYEES PROTECTED?

Working in today's modern, high-tech environment is much more advanced than it has ever been before. New processes, techniques, machines, **chemicals, noises – NEW RISKS.**

Your employees may be exposed to more hazardous chemicals, dusts, mists and fumes that they have ever been in their employment careers –

Here's a partial list of the exposures that we've found in various working environments throughout the country:

- Lead
- Carbon Monoxide
- Asbestos
- Acids
- Agriculture Dust
- Mold
- Paint Fumes
- Acid Fumes
- Chemical Mists & Fumes
- Pesticide/Herbicide/Fungicide
- Diesel Exhaust

There are
solutions to
exposure
injuries.

Industrial Hygiene Programs & Services

AIR SAMPLING

Air sampling projects are not only required for OSHA compliance, they are a sign of a active employer who is concerned about the health and safety of their employees. The value of a proactive industrial hygiene program is not only to ensure OSHA compliance, but also fosters a well-planned worker compensation strategy, as magistrates and courts have up held sampling results in favor of employers.

SOUND LEVEL TESTING

Furthermore, short term sound level testing (with a sound level meter) can be conducted in areas that are suspected of producing noise levels at or above the OSHA action level of 85 decibels for over an 8-hour time weighted average (TWA). These noise level readings will allow our staff to determine if an additional, long-term noise survey is needed or required.

These test results can lead to:

- Occupational Exposure Plans
- Air Quality Assessments
- Biological Contamination (Mold & Bacteria)
- Noise Monitoring
- Hearing Conservation Programs
- Feasible Recommendations
- Exposure Control OSHA Compliance
- Ventilation Survey
- Respiratory Protection
- Routes of Exposure & Sources
- IH Assessment Program Implementation
- Tailored IH Training
- Evacuation Plans

Cambridge Risk Control can help.

Companies, quite possibly like yours, are facing similar situations - out of control worker's compensation costs, worker exposures and injuries, OSHA fines, etc...

We can offer help with a wide variety of industrial hygiene testing options ranging from simple air quality and sound level testing to long term, time weighted exposure measurements.

Proactive or reactive, we can help. We will meet with you to see where you are, and discuss where you should be. We will make sound, feasible recommendations to take you to that *next* level.
