

Construction – Fall Protection, Wear It !

When you're working on scaffolding, a tall ladder, a tower, a crane, an antennae, or any other elevated surface over 6 feet -

WEAR FALL PROTECTION !

- Inspect your fall protection before each use.
- Anchor to a solid, stable point.
- Use a "deceleration device".
- Never use "Body Belts" for fall protection!
- Replace your fall protection when it's worn out or frayed.

Your life may depend on it!
