

## Fire Safety – *The Facts About Gasoline*

Gasoline is the most widely used fuel in the world. However, it's frequently used improperly so that it ends up causing fires in homes & businesses. The facts:

- In 1998, there were 4,700 gasoline fires in U.S. homes, resulting in 86 deaths, 463 injuries and \$92 million in direct property damage.
- **Many fire injuries resulted from unintentional causes such as: fuel spills or releases; using gasoline to wash parts, clean or refinish; gasoline too close to a heat source; children playing; improper storage; using gasoline to kindle a fire; and improper fueling technique.**

### Gasoline Fire Prevention?

- If fire does start while handling gasoline, do not attempt to extinguish the fire or stop the flow of gasoline. Leave the area immediately, and call for help.
- Do not use or store gasoline near possible ignition sources (i.e., electrical devices, oil- or gas-fired appliances, or any other device that contains a pilot flame or a spark).
- Store gasoline outside the home (i.e., in a garage or lawn shed) in a tightly closed metal or plastic container approved by an independent testing laboratory or the local or state fire authorities. Never store gasoline in glass containers or non-reusable plastic containers (i.e., milk jugs).
- Store only enough gasoline necessary to power equipment and let machinery cool before refueling it.
- Never use gasoline inside the home or as a cleaning agent.
- Clean up spills promptly and discard clean-up materials properly.
- Do not smoke when handling gasoline.
- Don't fill a hot engine when using portable powered tools (lawnmower).
- Never use gasoline in place of kerosene.
- Use caution when fueling automobiles. Do not get in and out of the automobile when fueling. Although rare, an electrical charge on your body could spark a fire, especially during the dry winter months.
- Only fill portable gasoline containers outdoors. Place the container on the ground before filling and never fill containers inside a vehicle or in the bed of a pick-up truck.
- Follow all manufacturers instructions when using electronic devices (those with batteries or connected to an electrical outlet) near gasoline.

Don't use Plastic Gas Containers!

Use Metal Safety Containers!
